Duration : August 2017 - June 2020

PROJECT #1

Project Name : OTT

Client : Rovi Crop.(Tivo), Bangalore

Role : Quality Analyst

Project Description: The OTT project is concerned with providing Metadata for movies and TV shows in all countries. We provided end users with availability, video, and rental information. This involved handling data from various sources across 55 countries.

Roles & Responsibilities:

- Understand the OTT site and test the data based on availability information provided by the site.

- Look for correctness of availability and metadata information. And identified and reported the need for enrichments of data if needed.
- Performed localization testing. Verified the correctness of the information on other languages.
- Worked with tools like JIRA, Asana in documenting the quality issues and communicating with dev and data teams.
- Worked on creating sanity reports and alarms for data discrepancies.
- Preparation of weekly and monthly status reports.

Project Name : HOTT

Client : Caavo Pvt ltd, Bangalore

Role : Quality Analyst

Project Description :Caavo acts as a control centre for the TV and all streaming and STB services.

Roles & Responsibilities:

- Understand the client requirements, writing test cases accordingly.
- Performed Functional, UI, System, Regression Testing.
- Defect logging and tracking using JIRA tool.
- Test status reporting and daily calls with clients to discuss the progress of the project.
- Worked on a regression test before each release and reported the bugs to the client.
- Supported API testing for OTT Box backend using tools like the postman.Documented test defects and procedures to enable accurate replication and ensure compliance with standards.
- Lead a team of 5 people and assigned the test modules based on the priority.
