Professional Summary

Current Organization: Capgemini Engineering

Period: Jan 2018 to Present

Technologies: Java 8, Spring, Angular, Node JS, Javascript, HTML, CSS, Oracle and Elasticsearch database, Restful web services, Junit, Maven, Git, Jenkins

Project Details: My current project belongs to IoT and networking domain and it is a network management system for managing devices for advanced metering infrastructure. It provides the ability to measure device performance in the network to monitor, diagnose and troubleshoot problems in the field.

Previous Organization: Fidelity International

Period: June 2017 to Jan 2018

Domain: This project belongs to finance domain and is directed towards printing out regulatory letters to UK based customers for various events like corporate actions, copy of transaction, change of customer details, change of advisor details etc.

Previous Organization: Infosys

Period: July 2014 to June 2017

Project Details: This project belongs to the e-Commerce domain and facilitates the selling of customized and personalized products. The project mainly consists of three modules: Admin, Configurator and Order Handling module (OHM). The Admin module is responsible for setting up the data and related configurations for various products. The Configurator module is responsible for rendering UI to the customers and helps them configure and buy the products online. Order Handling Module takes care of order management and deals in the processing of data related to various orders placed by customers.

Roles and Responsibilities**Current Roles and Responsibilities include:**

- Requirement gathering and impact analysis.
- Designing, coding and deploying the changes.
- Monitoring the build and sonar report, bug fixing (if any).
- Client interfacing.
