  - Preparation and maintenance of the run and Execution Plan.
  - Participation in defect management meeting and progressing resolution.
  - Creating daily and weekly status/defect Report.

**Title** **CCPM**

**Client** **AT&T**

**Description** Call Centre performance management:- Main objective of this project is to maintain the At&t agents hierachy data and there commision distribution based on there sales performance

This was an implementation of near real time data warehouse on sales related data. Continuous data replication into DWH via golden gate from OMS and CRM systems for Uverse, Wireless, Wireline & DTV services. It helps customer to view reports related to sales happened with analytic capability.

- Responsibilities**
- Writing Complex SQL to validate the requirements.
  - Perfroming end to end validation.
  - Analyzing requirements and participating in design review calls.
  - Creating Test Strategy.
  - Preparation and maintenance of Test Plans.
  - Stakeholder communication including sign-off on test activities and deliverable.
  - Manage the creation and maintenance of test scenarios and scripts.
  - Creating Environment to run the Test Cases.
  - Preparation and maintenance of the run and Execution Plan.
  - Participation in defect management meeting and progressing resolution.
  - Creating daily and weekly status/defect Report.

**Title** **Sunrise**

**Client** **AT&T**

**Description** The Sunrise platform is the single place for the Retail Sales Organization to view and analyze all information needed to understand and improve performance of the Sales organization for all products Wired and Wireless. Including Sales Whiteboard and Key Performance Indicators, Customer Satisfaction, Inventory, and include Staffing, Scheduling, Training, Commissions, and Security. The goal is to be able to recreate a virtual store for any given point in time.

The Sales Dashboard provides access to information for all levels of the organization in a easy to access, and intuitive format. By integrating data from many systems, it turns data into information, that is immediately useful, and drives understanding of cause and effect for the Sales Organization across many Key Performance Indicators. The Sales Dashboard provides region level customization and limited ad-hoc abilities to all levels of the organization.

- Responsibilities**
- Writing Complex SQL to validate the requirements.
  - Perfroming end to end validation.
  - Analyzing requirements and participating in design review calls.
  - Creating Test Strategy.
  - Preparation and maintenance of Test Plans.
  - Stakeholder communication including sign-off on test activities and deliverable.
  - Manage the creation and maintenance of test scenarios and scripts.
  - Creating Environment to run the Test Cases.
  - Executing schedule to test the dependencies.
  - Preparation and maintenance of the run and Execution Plan.
  - Participation in defect management meeting and progressing resolution.
  - Creating daily and weekly status/defect Report.

**Title** **Track IT**  
**Client** **Barclays**  
**Description** This is a web-based Portal which facilitate customers of the client to track their status of submitted application /requests online also this project had different features which notifies customers at different stages of progress of their submitted requests through email and SMS

- Responsibilities**
