Projects:

1. HPC – Data Management tool

The projects support the healthcare facilities in United States. It manages all the data exists in the system and runs the cycle for the claims processing. Analyse the behaviour of the sanctioned and unsanctioned bodies involve in the contracts in participating with the providers.

Worked on the claims processing and QNXT data analyst for the Molina Healthcare. The application handles the facility, rendering providers and customers data and supports the billing and claims processing.

Technologies: Infosys Autoload tool, Facets, SQL Server, SSIS, MS Excel lookups and joins.

Tools: QNXT, Iserve,

Role: Data Analyst

Client: Molina Health.

2. WEB BASED FORECASTING SYSTEM

WBFS (Web Based Forecasting System) is a system designed specific to ASE group to plan, forecast, and summarize their business on worldwide. The system provides the environment where users can import the raw data, process it, and generate the distinguish reports which can help in estimating the figures to plan for future. The users from sales department provides the raw figures and actual figures for every month and the system processes the data and generates reports for Actual sales, estimated plan, Sales Plan and Forecast for next 5 years to compare the facts and data to run the business.

Our development Team responsibility is understanding the functional elements, business requirements and translating them into technical requirements. Finding appropriate solutions for those requirements in an easy way and preparing low level technical approach documents for them. Creating and altering Tables, Stored procedures, Functions, Views, Triggers etc., as per the requirements. Maintain the Referential integrity, domain, and data integrity by using available options such as Constraints etc.

Taken the ownership of the complete auditing for the entire product. Creating and dropping indexes for performance improvement. Preparing baseline scripts. I have Worked on Conversion of data. Performed manual unit testing for what has been coded. Ability to work on multiple projects and prioritize business tasks. Also involved in the setup of replication server of the database from the TAIWAN system in order to implement a parallel system to compare reports to our clients.

Also worked on the migration of the WBFS system from existing asp.net framework 2.0 to angular 2 and asp.net core. Worked on several master and functional pages and also worked on introducing new dynamic report pull functionality using handson table and SQL scripts.

Technologies: ASP.net, asp.net core, Web API, C#.net, angular2, JavaScript, typescript, SSIS, SSRS, SQL Server 2016, MS Excel VBA.

Tools: JIRA, SQL Server profiler, TFS, IIS 6 and 7.

Role: Sr. Associate Development

Client: ASE Group (Advanced Semiconductor Engineering).

3. Print Audit Tool

Print Tracking Audit tool is a software developed by Amplelogic development team to track the print activities in an organization. The application works for network and USB printers both. The application provides admin console to export reports based on the Users, Printer, and departments. The audit tool tracks printing commands through MSI agents installed on the user machines. The admin console provides UI for admins to delegate roles for multiple users to get reports based on their departments and location. The application consists of dashboard with current month data in graphical implementation. There are many other reports like IP based, monthly based and weekly reports.

Technologies: ASP.net, WCF, C#.net, AJAX, JavaScript, SQL Server 2014.

Tools: SVN, SQL Server profiler, IIS.

Role: Associate Development

Client: Exide Battery.

4. Active Directory Management System

AD Management tool is powerful managing and reporting tool developed by us which helps in providing single console application for admins to manage all Active Directory objects like Users, Groups, Computers and Organizational Units (OU). This includes delegating roles, audit trials, AD level reports and Help desk tool for resolving end user tickets which works for multiple domains. The tool also provides the Self-service console window where users can reset their account passwords and unlock their accounts by themselves. It helped the organization to keep control on the active directory server and delegating roles to users to self-set their locked accounts and reduced the wait time and influx to admins around 90 percent of the daily basis resulted in huge increase in productivity.

Technologies: ASP.net, WCF, C#.net, AJAX, JavaScript, jQuery, SQL Server 2014.

Tools: SVN, TFS, SQL Server profiler, IIS, Active Directory, Group Policy console.

Role: Associate Development

Client: Dabur, Bank of Maharashtra, University of Mumbai, Safexpress, Intelenet Global Solutions, MaxBupa Health Insurance, Tata Power DDL, Alembic pharma.

Self Interest and Internal Projects:

Bulk email app: this app helped in providing the UI where a user say from a sales team can get a feasibility to design an email template and can maintain multiple recipients list in excel or csv file. The same can be imported and set and email trigger in bulk. All the emails recipient will get the emails one by one. This can be used for the advertisement purpose or to notify a certain set of people without keeping all in cc and maintaining a privacy. The tool also consists of reports to check the fails and success and customized graphs for the push mails.

DB Compare tool: DB compare tool is an windows form app which is developed to help Business analysts or support team to compare databases for a generic solution under different servers.

DB Backup & restore tool: DB backup & restore tool is an asp.net windows form app which is developed to provide support access to take backups and perform restores on UAT servers without giving them actual access to database servers. Also, we can track the user's system name, IP and access names for the activity performed.

Auto shutdown policy implementation: the autos shutdown policy we implemented using sql server scripts and PowerShell to check the exceptions added for any team or individual user to bypass the shutdown over a specific time and approval.

Declaration:

I hereby declare that the above furnished details are true to the best of my knowledge
and belief.

Current Location: Hyderabad   **Thank You**
